Abstract: In the article each other communication system humanity in society progress stages, revolutionary changes in particular word. Also, publishing, telegraph and television appearance to be, information exchange in the process instead of this regarding achieved achievements about thoughts statement done.

Key words: communication system, personality society, publishing, printing house, telegraph, radiotelegraph, Morse code alphabet, television.

Time progressive to be able with humanity language and writing from the development then again one communication revolution from the beginning forgave. In this publication their work on the road to put with related current issue cross-cutting was standing.

Publishing – books, newspapers, magazines all press units preparation, printing with to engage in process. Publication work, especially the press, primarily humanity of civilization legal product and him/her progressive provider important from factors is one. Periodic press society development so one in the phase to the body. It comes to this:

- a) writing appearance was and developed to be need;
- b) population most part literate to be need;
- c) the press technical basis created, printed bench and other necessary tools working issued to be need;
- g) in society dominant and other groups, classes print word tool with political, economic, spiritual benefit see need noticed to be need. That is in society there is class, stratum, groups or individuals people to the public own ideological the impact to transfer, to the public own thoughts, ideas to inform for from the press use need perception necessary [1, 10].

We see, standing today's publication works from this many centuries ago the world his face. For example, from our era Roman emperor Julius Caesar in the first century BC by issued from the ganch made special boards the first buds of the press These are "Acus Senatus" ("Senate events") and "Actus populi Romani" ("Roman people" to life circle events"), in which this city period of the government supreme management office was senate meeting about messages and the Roman people to life circle events summers and they people their studies for of the city crowded to their places putting. This plaster was put on boards although this city period to his people various information delivery. Although it gives, its to be released because the Roman Empire of the rulers own their views to the public to convey to him ideological impact showing from standing consists of was socio-political need. Later in the 8th century "Capital" in China called "news" to the board carved written newspapers appearance It happened. Just like that such early publications. Even in Japan, on the board thinking, "Don't print it "newspaper "name" with was released. This publications also to people news delivery

to give with together this city countries of the rulers socio-political views, interests reflection brought was [2, 11].

Print of the machine invention to be done of humanity cultural-spiritual in progress huge step it has been and of the press wide in scope to develop road open gave. XVI century in the middle come In Europe print bench invention was made in Germany. Johann Gutenberg book pressing for the first equipment used and in 1564 Ivan Fyodorov in Russia by first print book publication was later such print first press from machines publications – newspapers publication in the process of usable started in Europe first print newspapers appearance These were in Germany in 1609. publication “Oder Zeitung”, published in England in 1622 publication “Weekly” news from”, French from 1631 in the language come out “La Gazeta” and from others consists of These newspapers were to the public information delivery to give with together this city period of the rulers to policies service would do was [3, 12].

In Turkestan book Russia of the empire own reign installation with wide development The first one was found in Tashkent in 1868 printing house military district headquarters in the presence of organization. This printing house initial in the period good unequipped was. That's why this on the ground various forms, work papers printed. This printing house newspaper publication to do not adapted for another in 1869 printing house organization Here work for From Russia letter The collectors were also called. This printing house in Arabic since 1870 letter to the font has It will be.

Since the 1870s Uzbek books in other languages publication come begins. Published in 1872 done Shahimardan Ibrahimov's book “Calendar” their the first one The book was published in 500 copies, 17x13.5 centimeters in size, without cover released [4, 10].

Russian government publishing house our country in the field spiritual appearance change for He tried hard. However Russian of the policy ideological to the pressures intellectuals layer, national pride tall was our people courageous fought.

Publisher social in life to be standing realities reflection to maintain , certain information implementation educational, scientific, spiritual-enlightening knowledge to the public to deliver for service to do important tool. Publisher life in the pot boiling the real realities that emerged various on the fronts showing gives. Human thought, consciousness clarifying soul window pure guardian, spirit nourishing, spiritual from depression take outgoing artistic creativity examples, socio-political activity as a result collected vital produce evidence production, science and technology related current scientific issues, practice implementation to be completed waiting theoretical knowledge, music, art, sports achievements, historical and spiritual wealth today's generation in knowing, in feeling support giver sources to the surface in the release publisher's place unreasonable big.

Publisher in the early stages of its work printing houses for machines, materials, letters dial for literate experts insufficient was, but this such as huge of affairs systematic on the road to be put our people truly to the achievement became .

Humanity in front of standing again one need information tools fast, easy, convenient to deliver necessity reason appearance. It's over. Now to the field telecommunications tools. It came out.

Information exchange process quality to increase help giver wired and wireless communication lines to the body on arrival electricity of the vine invention to be done important motivation It was. This is telegraph, radio, telephone communication, television for consumption take incoming prime factor to be service did .

Telegraph – long to the distance writing information to deliver for intended communication tool. Electric telegraph connection for in practice application possible was first telegraph device In Russia, 1832, the PLShilling working Telegraph of the apparatus one how many successful construction Russian scientist B. S. Jacobi created. Initial electricity telegraph from the apparatus one in 1837 by an American scientist S. Morse invention did. Morse own apparatus for special alphabet thinking found. This is in the alphabet letters instead of dot and dashes This is used inventor in honor of his/her name with “Morse code alphabet” [6].

Next in years physicist Alexander Popov in the world first to be electricity signals to the distance wireless transmission the tool created on May 5, 1895 own Russian physicist who discovered technician society at the meeting demonstration did and this received a patent for his invention. Therefore this date Radio Day as to history entered. It was called a radiotelegraph, this device only Morse of the alphabet symbols, i.e. dots and dashes short signals combination forward they will Of course , only Morse alphabet transmission and acceptance just to do capable apparatus experts was not satisfactory , so for they air through human to transmit one's voice as well achieve regarding movements continue Finally , this powerful apparatus of the 20th century first ten anniversary second-to-last ten anniversary at the beginning discovery radiotelephone name received [7, 310].

20th century in the middle come, journalism classification again one appearance, again one form with rich – him It was called television (tele – Greek “far”, videniye – Russian “seeing”). Television journalism electronic to the technique based one type electromagnetic waves through voice and the image far far, wide to the area spread through work sees. Television media classification separately importance and to oneself typical to the feature has was type considered, social life word with to describe (newspaper) and magazine), voice with broadcast (radio) not, maybe directly show [8, 91] .

Television of the language to oneself originality journalist and blue screen through information each one that is transmitting person of speech purity, correctness, fluency, sound tempo correct organization, images good quality, bright and diverse from colors consists of to be, format, writing text font type and size, spelling in terms of excellence, audio and video transmissions voice and background mutual coordination, reliability and from the impressionability consists of [9, 21].

Conclusion instead of to say maybe, personality society a turning point for made this communication tools today's digital technologies century for foundation task grass is giving. Every news, change period on demand similar rejuvenated Publishing, telegraph, television appearance to be human factor the most great from the achievements one it has been .
